

ALS STUDY DETAILS

Goal of the study:

This research is to analyze biomarkers such as genetic, environmental and microbial factors in the blood of patients with Lou Gehrig's Disease (ALS) in order to determine what may influence the diseases's development. This may help lead to new diagnostics or treatment options for patients living with ALS.

Patient Reimbursement:

\$50 for completing the at-home visit

Target Population for the study:

Patients ages 18 and older diagnosed with Amyotrophic Lateral Sclerosis or Lou Gehrig's Disease (ALS)

Contact Information:

Renz Basa: (818) 650-3427 or basa@sanguinebio.com

Participation Process:

Participation requires a simple blood donation and a mobile medical professional will work around your schedule to meet you in the comfort of your home and perform the blood draw.

Once you sign up a clinical research coordinator will contact you within 48 hours to confirm your health information and tell you more about what is required to participate in the study. When you are ready to be scheduled, your research coordinator will work with you to schedule an at-home visit. One of Sanguine's mobile health staff members will meet you in the privacy and comfort of your home to explain the research study and perform the blood draw.
